## LARYNGEAL PAPILOMA IN CHILDREN

Bambang Supriyatno, Lia Amalia

*Dept of Child Health, Faculty of Medicine, University of Indonesia, Jakarta, Indonesia*

Laryngeal papilloma is a benign tumor frequently found in children. It is caused by strains of human papilloma virus (HPV) family.

Practically all patients with laryngeal papilloma present with hoarseness or a weak voice; chronic cough, paroxysms of choking; recurrent respiratory infections also may occur. Partial airway obstruction may manifest as stridor or chest retractions. Diagnosis can be confirmed using a flexible fiberoptic laryngoscope to visualize the larynx. Papillomata have a characteristic wart-like appearance, and tend to be concentrated on the free margins of true vocal folds, particularly at the anterior commissure.

The mainstay of treatment is surgical ablation. The role of medications such as alpha-interferon, acyclovir, ribavirin, and retinoic acid are still debatable.

## ACUPUNCTURE FOR VERTIGO

Prasti Pirawati, L. Yvonne Siboe

*Dept. of Acupuncture Dr. Cipto Mangunkusumo General Hospital, Jakarta, Indonesia*

Vertigo is a common complaint, referred to dizziness or a sense of imbalance, can be due to vestibular system disorder. The symptoms may cause anxiety and disturb the patient's social life.

Conventional treatment is still not satisfactory.

This is a report of a 50 year-old female with vertigo, treated with acupuncture and showed good improvement.
